ABSTRACT

Literature mentioned that collection of cash waqf in Malaysia is still at infancy level. The total collection of cash waqf per employed Muslims in Malaysia for 2019 is only RM0.28 as mentioned by W. Ismail et, al. (2021) who suggested that technology usage could be one of the methods in improving cash wagf collection. It was supported by Tri Kurniawati et al., (2021); Kasri & Yuniar, (2021); Zheng (2020); Li et al (2018) who have highlighted positive relation between technology usage and intention to donate, and they conclude that intention to make donation is influenced by technology usage. The satisfaction from donating using the technology increases the intention to donate as the cost is also very minimum as pointed out by Tri Kurniawati et al. (2021). Hence, an idea of creating a one stop cash waqf as an innovation of the existing method to provide convenience, trust and flexibility to the Muslims to contribute cash waqf is a suitable alternative today. It is to provide a platform that all the collectors of cash waqf need to register to be a participant in one stop cash waqf which would be validated by the Waqf Institutions. Contributors could easily choose to whom they intend to contribute. This would be able avoid different forms of cash waqf fraud as highlighted by Rahman & Sohel (2019). At the same time, this platform will provide varieties of waqf contributions such as school, university, mosque, orphanage house, and public facilities. The suggested platform could be in a form of website which is generally convenient to the public. This proposed method would be able to reduce illegal collection of waqf. This kind of technology improvement is envisaged to increase collection of cash waqf by convincing Muslims with trust, flexible, convenience and friendly user.

INTRODUCTION

The collection of cash waqf and its sustainability would be a driver in ensure the successful of cash waqf implementation. In the context of contribution of cash waqf, it is related to the awareness of cash waqf. Currently, in Malaysia, the collection of cash waqf is not at an impressive level. Nowadays, too many cash waqf collector existed including Non-Profit Organization (NPO), Non-Government Organization (NGO), institutions and organization and existed some of the collector were syndicated. According to Yusop, (2021), the generosity of Malaysians in helping to and giving cash waqf for the benefit of Muslims has attracted the attention of irresponsible parties to commit fraud. This kind of issue would encourage more syndicated parties to collect cash waqf for their benefit. Therefore, the idea of one stop cash waqf as a pool of cash waqf collector in one website with the verification from SIRC and manage by the authorized body would be able to eliminated the issue of cash waqf, at the same time would increase cash waqf contribution.

METHODOLOGY

- Research has been done and a number of paper were published
- Primary data was collected from the employed muslims
- \succ Findings shows that technology usage is significant to influence people to contribute cash waqf
- \succ Find the best way for technology advancement to implement in cash waqf
- \triangleright Run test the website to a number of people and they agreed the website created offered convenience, user friendly, flexibility and easy to the cash waqf contributor to make their own decision because variety of choice offered.
